5G Roadmap Workshop

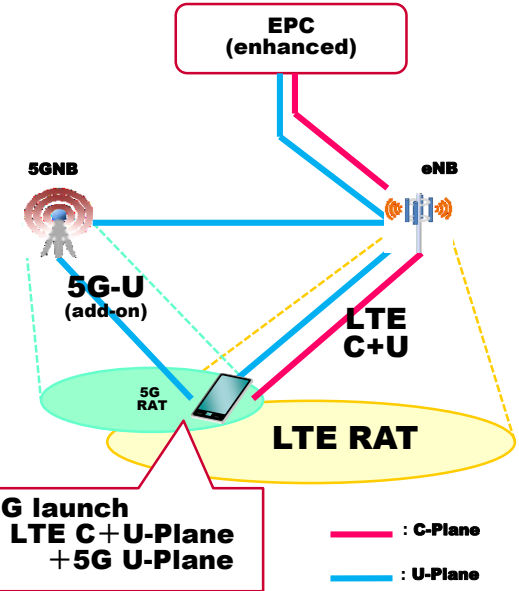

Malla Reddy Sama

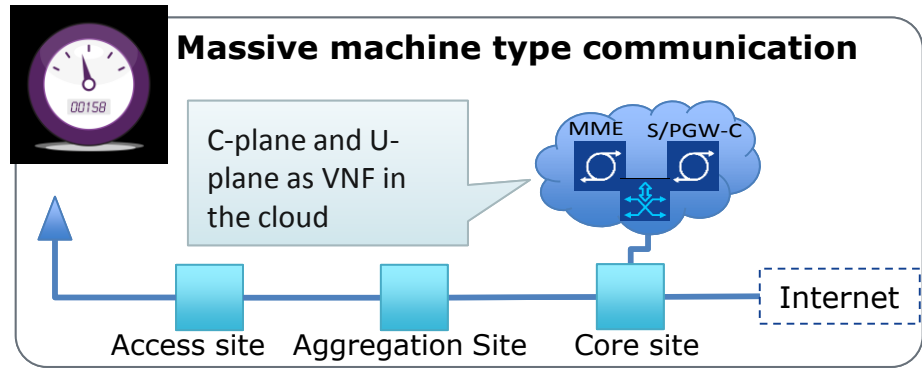

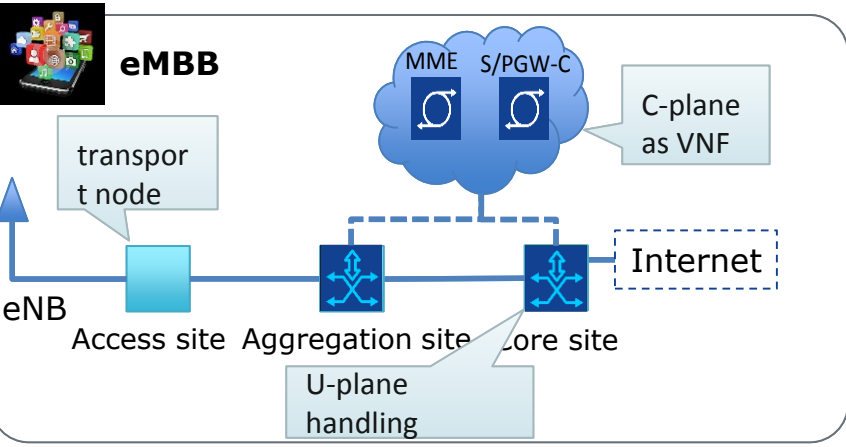

5G launch and Enhance EPC to support 5G use cases

(e)EPC as core, NSA 5G RAT

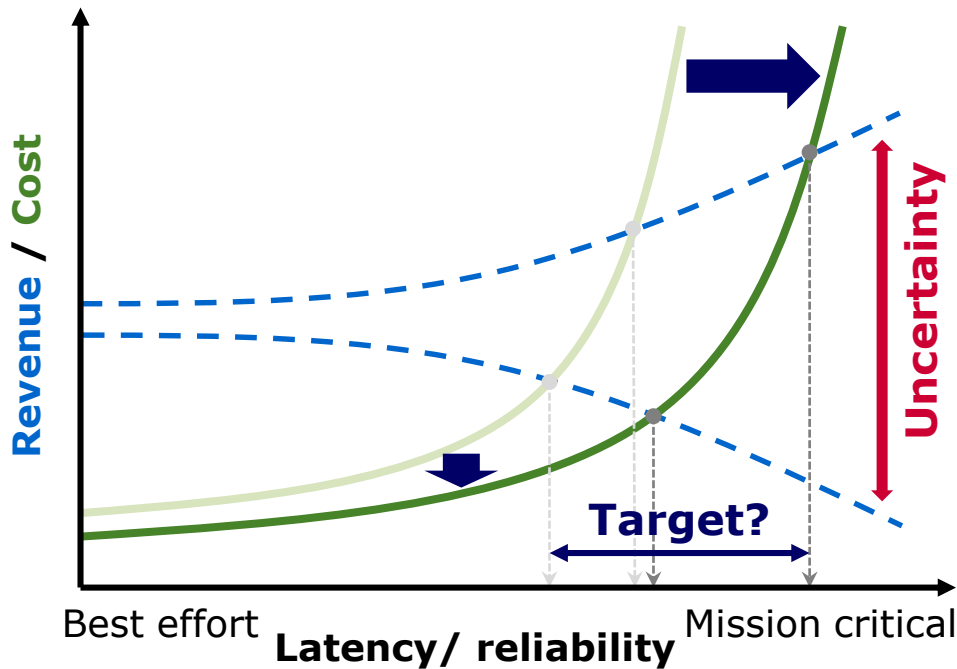

→ (e)EPC might well support key 5G use cases (eMBB, MMTTC, URLLC): rather a deployment than an architecture question?

“architecture”: (only) one ingredient to low latency. And: sufficient business there?

How we might reduce latency:

- 1) Radio latency
- 2) Location (UE – service distance)
- 3) Architecture?

- Cost exponentially increases with decreasing latency
- Is there sufficient business to justify ultra (read **ULTRA**) low latency costs?

Harmonize Social contribution beyond borders, across generations

Evolve Evolution of service and network

Advance Advance industries through convergence of service

Relate Creating joy through connections

Trust Support for safe, secure and comfortable living
